RIVER BANK ASSESSMENT FOR 2012

FLOOD CELL 6 Snape to Langham Bridge (South)

I have walked both sides of the river from Snape Bridge to Iken. I attach a picture of a new work at Iken cliff-which is in addition to the little pier which I reported last year. Neither seem to need attention.

FLOOD CELL 7 Snape to Langham Bridge (North)

On the North side there is some 5 metres of crest collapse 150 metres from where the river wall ends at the entry to Snape Warren woods and about 100 metres beyond the end of the recent footpath repairs-possible 3 minus!
